Newton's Laws

By Ms Toal

FIRST LAW OF MOTION:

- An object at rest will stay at rest and an object in motion remains in motion at constant speed and in a straight line unless acted upon by an unbalanced force. (28s → 48s; 1:04s → 1:10s; 2:48 → 3:10)

Inertia

- The tendency of an object to resist a change in motion
- Inertia commonly described as Newton's 1st law
- · Depends on the MASS of an object.
- The more mass an object has, the more inertia the object has.
 - stack of rings
 - 7 examples of imerta

Newton's 2nd law

Acceleration (m/sec2)-

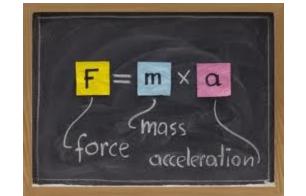

- The acceleration of an object depends on the mass of the object and the amount of force applied.
- F = ma
- http://www.youtube.com/ watch?v=UhCGOqoY9Dc
- $(0 \to 18s; 27s \to 51s)$

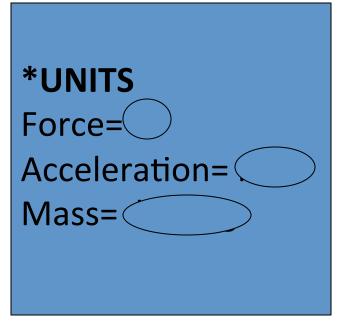

Mass (kg)

• F= <u>m x a</u>

• m= <u>F</u> a

Question 2

Two forces of 6 N and 3 N act upon an object in opposite directions. What would be the acceleration of this object if it has a mass of 100 kg?

- A) 0.03 m/s²
- B) 0.09 m/s²
- C) 0.3 m/s²
- D) 0.9 m/s²

Newton's 3rd Law

 Whenever one object exerts a force on a second object, the second object exerts an equal and opposite force on the first.

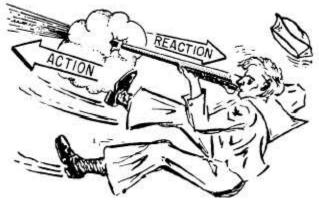

· For every action, there is an equal and opposite
