## How To Use Numbers

#### Open Numbers

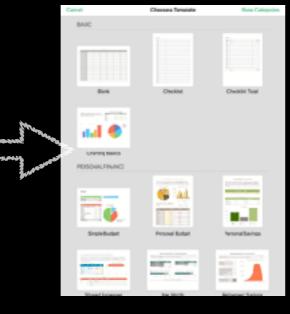

### Tap Create Spreadsheet

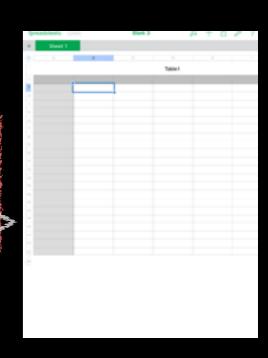

## Tap Blank

## You get this:

## You will list all your identified materials in the first column

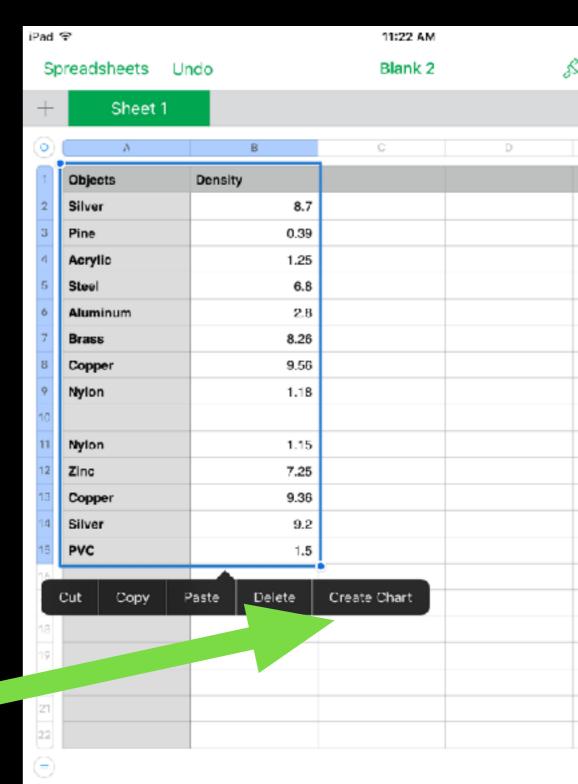

Type in their densities in the second column

I have used "pretend" objects and numbers in the example

Tap the word "objects", then move the corner dot to put a blue box around your data

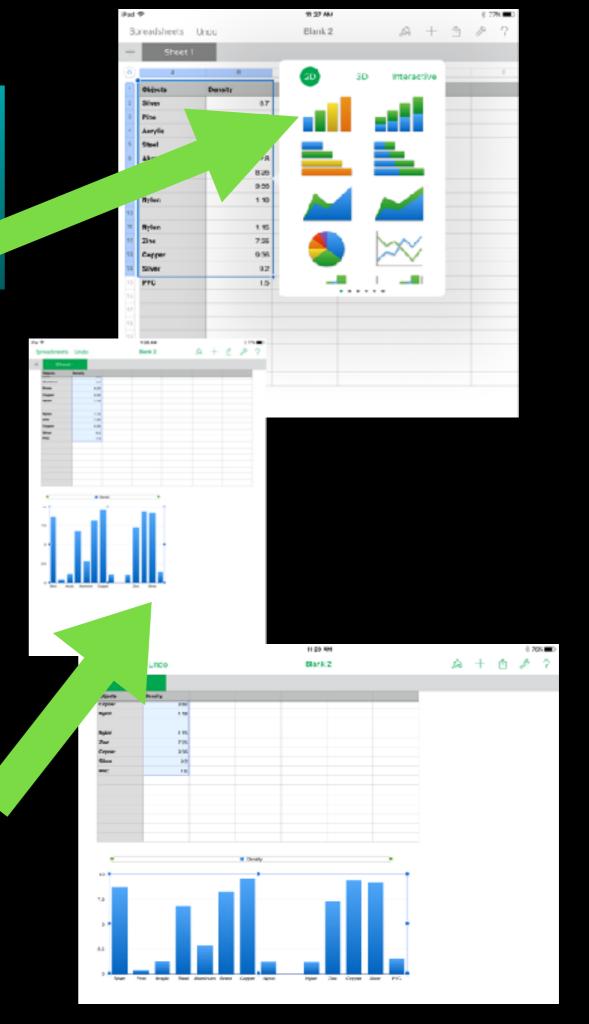

Then tap Create Chart

## Choose a Vertical Bar Graph

Turn your iPad sideways so that you can see more of the graph

Now stretch Graph out using blue dot in corner so you can see all the materials

How to add title and label the vertical and horizontal Axis

1. Make sure you have the blue dots around graph

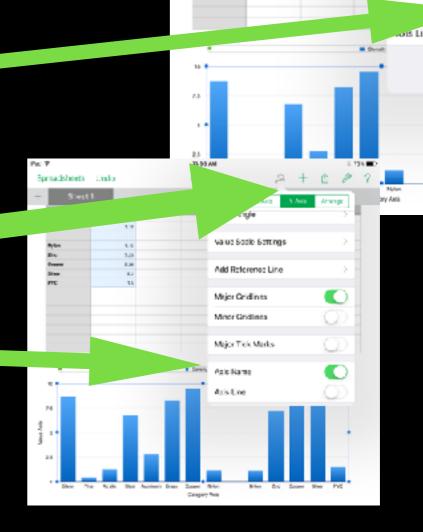

## 2. THEN, tap the PAINTBRUSH

Label Angle

Major Gridlings

3. Tap *X Axis*, Slide *Axis Name* to Green

4. Tap Y *Axis*, **Slide up** so you see the bottom and slide *Axis*Name to Green

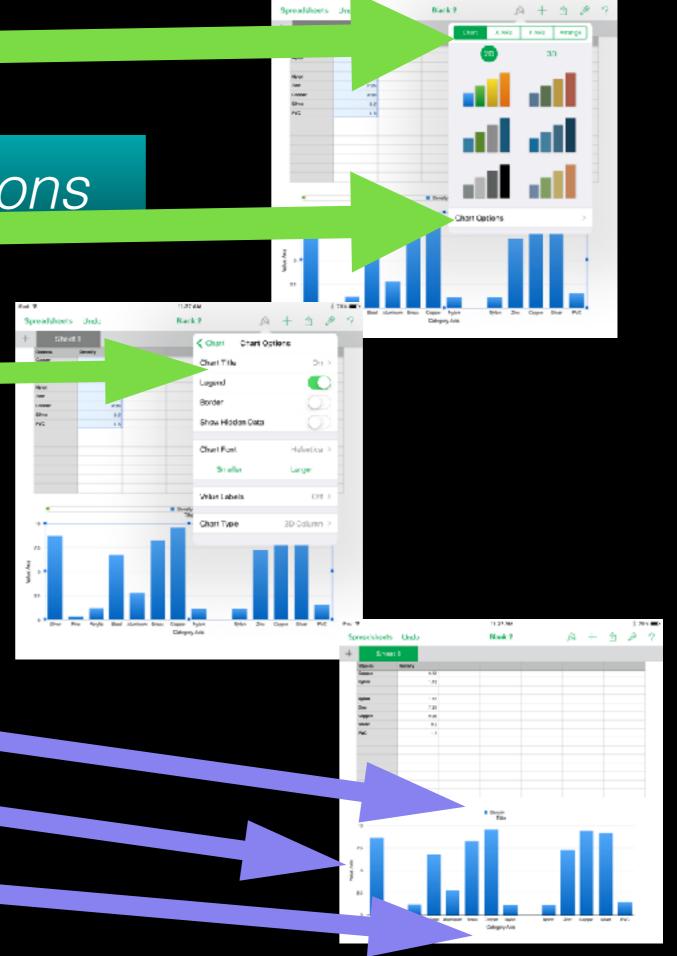

#### Tap Chart

#### Then, tap Chart Options

Slide Chart Title On

Now tap in your graph and label and title it appropriately

# Lastly, try to figure out how to change color or fonts

You need to take a screenshot of this.

I will also check iPads, so do not delete it. This screen shot will go into your Science folder on your GDrive.
